

RFP #1661 – Primary Prenatal Care Innovation Grants
April 29, 2019

	OFFEROR QUESTION	DEPARTMENT RESPONSE
1.	Question about this grant what primarily are they looking for. I would love to do something in my community with Prenatal because no one has it around here cause our access is not great for health care.	<p>The Department is interested in innovative delivery models that prevent future health issues. We are seeking proposals to test evidence-based maternity care service approaches that enhance current care delivery and address medical, behavioral, and psychosocial factors that can be present during pregnancy and contribute to preterm-related poor birth outcomes. Enhancements to prenatal care have the potential impact to impact high rates of poor maternal and infant birth outcomes.</p> <p>We are also seeking proposals that test evidence-based primary care innovations focused on innovative delivery models that promote better health, improved care, and lower costs.</p>
2.	Does this opportunity apply to those hospital/clinics that currently provide full prenatal care? Also, how many awards are expected to be funded and what is the max allowable for a proposed budget?	<p>Hospitals, clinics or other entities that meet the eligibility requirements described in the RFP (e.g. organizational capacity) that currently provide part, or all of the continuum of care are eligible to apply.</p> <p>The Department intends to make multiple awards with \$1 million in total funds available.</p>
